

IEA 10th Annual Global Conference on Energy Efficiency in Brussels, CEO Letter of Commitment

Brussels, June 12th, 2025

Introduction

Energy efficiency is a crucial vehicle for achieving national energy security and affordable energy, and for enhancing industrial competitiveness.

This important topic is being highlighted at the International Energy Agency's 10th Annual Global Conference on Energy Efficiency, co-hosted by IEA Executive Director Dr. Fatih Birol and European Commissioner for Energy and Housing Dan Jørgensen in Brussels on 12 and 13 June 2025.

The event is organized in partnership with the Energy Efficiency Movement. The IEA Global Conference is a flagship international event on energy efficiency, providing a forum for ministers, CEOs, and other senior leaders to drive action on energy efficiency.

The 10th edition of this internationally recognized event is the most significant that the IEA has held to date, with a key focus on implementing the COP28 goal of doubling energy efficiency progress this decade.

The event builds upon the Nairobi Business Leaders' Action Plan for Stronger Public-Private Collaboration on Energy Efficiency, which was a key outcome of the IEA 9th Annual Global Conference on Energy Efficiency in Kenya in 2024.

IEA 10th Annual Global Conference on Energy Efficiency in Brussels, CEO Letter of Commitment

Our Commitment

The private sector plays a key role in the Public-Private Collaboration to ensure energy security and affordability, improving industrial competitiveness and decarbonization, enabling investment for energy efficiency and contributing to the implementation of energy efficiency solutions that help fulfill Nationally Determined Contributions.

At the IEA's 10th Annual Global Conference on Energy Efficiency, the undersigned companies and CEOs agreed to:

1. Promote the role of business as a key vehicle for the implementation of industrial energy efficiency technologies.
2. Advance energy efficiency as an enabler for industrial productivity, decarbonization, and competitiveness.
3. Recognize the value of applying an energy efficiency-first principle as a driver for energy security and affordable energy.
